in codons is given for each CDS.

Usually the highest scoring match found by fasta -o is given for CDS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon. Gene prediction is based on positional base preference in codons using a specially developed Hidden Markov Model (Krogh et al., Nucleic Acids Research, 22(22):4768-4778(1994)) and the FramePlot program of Bibb et al., Gene 30:157-66(1984) as implemented at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Jun/cgi-bin/firshcip/
Jun/cgi-bin/firshcip/
Correct initiation/Scdon. Where possible we choose an initiation
coon (atg, stg, fig or (atl)) which is preceded by an upstream
ribosome binding site sequence (optimally 5-13bp before the
initiation codon) of if this cannot be identified we choose the most
upstream initiation codon. The sequence of the entire insert of the
sequenced clone. It may be shorter because we only sequence
overlapping sections once, or longer, because we arrange for a
small overlap between neighbouring submissions. Cosmid 51A overlaps
cosmid F76 on the Asel-F genomic restriction fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /db_xref-%SPTRINBL:09RL63"

SCC24
Streptcomyces coelicolor cosmid C24.

ALISTODA ALG45882
ALISTODA ALG45882
ALISTODA ALG45882
ALISTODA GG CARLOVALURE: Alpha-L-arabinofuranosidase;
calcium-binding protein; carrier protein; fatty acid synthase;
calcium-binding protein carrier protein; fatty acid synthase;
calcium-binding protein carrier protein; fatty acid synthase;
protein; protein kinase; carrier protein; spermidine, sprinting protein; sugar kinase; sugar transporter inner membrane
protein; sugar transporter sugar binding protein; transcriptional
regulator; two-component sensor histidine kinase.
Streptomyces coelicolor A3(2).
Actinomycetales; Streptomycineae; Streptomycetaceae: Streptomyces.

L (Abase I to 4089)
Actinomycetales; Streptomycineae; Streptomycetaceae: Streptomyces.

Kinashi, H. and Hopwood, D.A.
A set of ordered cosmids and a detailed genetic and physicai map
for the 8 Mb Streptomyces coelicolor A3(2) chromosome

M. Mirrobiol. 21 (1), 77-96 (1996)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Cerchoo, A.M., Parkhill, J., Barrell, B.G. and Rajandream, M.A. Direct Submission

```
in codons is given for each CDS.

In codons is given for each CDS.

Usually the highest scoring match found by fasta to is given for cost of solutions. The truth cost of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon. Generally developed gidden warkov wodel (Krogh et al., Nucleic Acids Research, 24(23):4768-4778[1944]) and the Frameslot program of Bubb et al., Gene al., 188-4778[1944]) and the Frameslot program of Bubb et al., Gene al., 187-56(1984) as implemented at http://www.nlh.go.jp/
jun/ogi-bin/frameplot.pl. CAUTION: We may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg, gtg, ttg or (att)) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon. If this cannot be identified we choose the most upstream initiation codon. If this cannot be identified we choose the most upstream initiation codon. If may be shorter because we arrange for a sequenced clone. It may be shorter because we arrange for a small overlap between and overlaps with cosmids C42 and 7A8 on the Asel-C genomic restriction fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     complement(2770. .3633)

Streptomyces coelicolor sequencing at The Sanger Centre is

```
controlly. The cosmit name, or (itsel tob), c (comprementary strand).

The more significative matches with motifs in the PROSITE database are also included but some of these may be fortuitous. The length in codons is given for each CDS.

Usually the highest scoring match found by fasts -o is given for CDS which show significant similarity to other CDS in the database. The position of possible ribbsome binding site sequences are given where these have been used to deduce the initiation codon. Gene prediction is based on positional base preference in codons using a specially developed Hidden Markov Model (Krogh et al., Nucleic Acids Research, 22(23) 4768 4778 (1994) and the Frameplot program of subb et al., Gene 30:157-468 4778 (1994) and the Frameplot program of subb et al., Gene 30:157-66 (1984) as implemented at http://www.nih.go.pp.

Jun/C91-bin/frameplot.pl. CAUTION: We may not have predicted the correct initiation codon. Where possible we choose an initiation codon (adg. ggv, ttg. or (att)) which is preceded by an upstream initiation codon.

Inbograme initiation codon. This cannot be identified we choose the most upstream initiation codon.

Inbogram: This sequence (att) why Nor be the entire insert of the sequenced clone of the sequence coverlapping sections once, or longer, because we arrange for a small overlap between enterpring submissions. Cosmid 8A11.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2788. 3258
